Compiled and printed by Chester Arthur Bullard

THE JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION
PUBLISHED WEEKLY
CHICAGO, ILL., U.S.A.
Vol. 48, No. 1, January 1, 1932

Preface.

To change old style into new, the first month must be called the third; and ten days added to all dates between 1582 and 1700; and eleven days added to dates between 1700 and 1752. For the single year 1700, eleven days are added.

Until 1752, when the English Parliament fixed January 1 as the commencement of the new year, it commenced with March 25 (the feast of the Annunciation) and the custom was quite general of calling a month by its number rather than by its name. The months were numbered as follows: March--1. April--2. May--3. June--4. July--5. August--6. September--7. October--8. November--9. December--10. January--11, February--12. Under this plan the following forms of entry were common: 30-8-1642; meaning Oct. 30, 1642. The legal year, until and including 1751, commenced with March 25; the year 1752, with January 1. Prior to 1752, as the legal year did not terminate until March 24, it was often the custom to continue the figures belonging to the months of the chronological year from March 25 to December 31 included, through January, February and March, to the 25 (of March) of the next legal year.

In the example 1641--1642, the last date is correct historically, and March 3, 1751 - 2 Old Style equals March 14, 1752 New Style.

In March 1533 Pope Gregory XIII. corrected the Julian Calendar. The correction of 1752 is described above.

In this book the names of some people have a raised figure on the right to indicate their generation in America. An Arabic figure on the left signifies that they are direct ancestors of the compiler.

The descendants of Arnold Bullard through his wife, Mary Ann Bigelow, have twenty generations of the Warren family in their direct line. According to Professor Warren, William De Warren married Gundred, a daughter of William the Conqueror; and De Warren's son, the Earl of Surrey and Warren, married Isabel, daughter of Hugh le Grand, Count of Vermandois and Valois. She was a granddaughter of Henry I., King of France. Therefore Bullards of this line have the blood of the royal lines of England, France, Germany, and Italy in their veins.

The following table shows the results of the reconciliation process for the month of January. The first column lists the date of each transaction, followed by the amount and a brief description. The second column shows the amount as recorded in the company's books, and the third column shows the amount as reported on the bank statement. The fourth column indicates any differences between the two records. The total for each column is also provided for easy comparison.

CHAPTER II

The first part of the chapter is devoted to a discussion of the various methods of determining the rate of reaction. The second part is devoted to a discussion of the various factors which influence the rate of reaction. The third part is devoted to a discussion of the various theories of reaction rates. The fourth part is devoted to a discussion of the various applications of reaction rate data.

The rate of reaction is defined as the change in concentration of a reactant or product per unit time. It can be determined by measuring the change in concentration of a reactant or product over a known period of time. There are several methods of determining the rate of reaction, including the initial rate method, the integrated rate law method, and the half-life method.

The initial rate method involves measuring the initial rate of reaction, which is the rate at which the reaction begins. This is done by measuring the change in concentration of a reactant or product over a short period of time at the beginning of the reaction. The integrated rate law method involves measuring the concentration of a reactant or product at various times during the reaction and then plotting the data to determine the rate of reaction. The half-life method involves measuring the time it takes for the concentration of a reactant or product to decrease by half.

There are several factors which influence the rate of reaction, including temperature, concentration, and the presence of a catalyst. Temperature increases the rate of reaction by increasing the kinetic energy of the molecules, which increases the frequency of collisions. Concentration increases the rate of reaction by increasing the number of molecules per unit volume, which increases the frequency of collisions. A catalyst increases the rate of reaction by providing an alternative reaction pathway with a lower activation energy.

There are several theories of reaction rates, including the collision theory, the transition state theory, and the steady-state theory. The collision theory states that a reaction can only occur if the molecules collide with sufficient energy and in the correct orientation. The transition state theory states that a reaction proceeds through a transition state, which is a high-energy state in which the reactants are partially broken and the products are partially formed. The steady-state theory states that the rate of reaction is determined by the rate at which the reactants are converted into the transition state.

Reaction rate data has many applications, including the determination of the activation energy of a reaction, the determination of the order of a reaction, and the determination of the rate constant of a reaction. Reaction rate data is also used in the study of chemical kinetics, which is the study of the rates of chemical reactions.

The first part of the paper is devoted to a general discussion of the problem of the origin of life. It is shown that the problem is not only a scientific one, but also a philosophical one. The scientific aspect of the problem is concerned with the question of how life arose from non-life. The philosophical aspect is concerned with the question of whether life is a necessary part of the universe, or whether it is a mere accident.

The second part of the paper is devoted to a discussion of the various theories of the origin of life. These theories are divided into two main classes: the theory of spontaneous generation, and the theory of biogenesis. The theory of spontaneous generation is the older of the two, and it is based on the idea that life can arise from non-life. The theory of biogenesis is the newer of the two, and it is based on the idea that life can only arise from life.

The third part of the paper is devoted to a discussion of the evidence for and against the theory of spontaneous generation. It is shown that there is a great deal of evidence in favor of the theory of spontaneous generation, but that there is also a great deal of evidence against it. The evidence in favor of the theory of spontaneous generation is based on the fact that life has been found to arise from non-life in a number of cases. The evidence against the theory of spontaneous generation is based on the fact that life has never been found to arise from non-life in a single case.

The fourth part of the paper is devoted to a discussion of the evidence for and against the theory of biogenesis. It is shown that there is a great deal of evidence in favor of the theory of biogenesis, but that there is also a great deal of evidence against it. The evidence in favor of the theory of biogenesis is based on the fact that life has never been found to arise from non-life in a single case. The evidence against the theory of biogenesis is based on the fact that life has been found to arise from non-life in a number of cases.

The fifth part of the paper is devoted to a discussion of the philosophical aspects of the problem of the origin of life. It is shown that the problem is not only a scientific one, but also a philosophical one. The philosophical aspect of the problem is concerned with the question of whether life is a necessary part of the universe, or whether it is a mere accident.

YALE.

Elihu Yale states that Bishop Bonner was Chaplain to Henry VIII., King of England. Bishop Bonner's daughter married Bishop Thomas Morton. The latter was born 1564. His daughter Ann married David Yale. David died 1617 and left three children, including Thomas', our ancestor.

1. Thomas' Yale, Captain, was our first ancestor of this Welsh family who settled in America. According to Elihu Yale, Thomas was the son of David and Ann (Morton) Yale. He was born 1616.

At the Astor Library, N.Y. City, the following statement, written with lead-pencil in Mr. Yale's geneology, is given below:

"The parents of Captain Thomas Yale were Thomas Yale, Esquire, and Ann Lloyd, his wife. See 'The Yales of Wales.'"

Capt. Thomas Yale came to America in 1637 with his father-in-law, Governor Eaton, and others. He settled at New Haven as a merchant in 1638.

In 1645 he married Mary, daughter of Capt. Nathaniel Turner of New Haven. In 1630 Captain Turner was living at Lynn, Mass. He removed to New Haven in 1638. Jan. 1646 he sailed from that place in Mr. Lamberton's ship, and was lost at sea with all his crew.

Captain Thomas Yale died March 27, 1683, aged 67 years. Mrs. Mary Yale died Oct. 15, 1704.

2. Thomas' Yale, Captain, first of New Haven and after that of Wallingford, was the son of Capt. Thomas Yale and Mary Turner, his wife. He was born

about 1647. He was married to Rebecca, daughter of William Gibbards, Esq. and Anna Tebb, his wife, of New Haven, Dec. 11, 1667, by William Jones, Esq. Mr. Jones was the Deputy Governor. Rebecca was the mother of all Captain Yale's children. She was born at New Haven, Feb. 26, 1650, and died in Wallingford about 1687 - 8. His second wife was Sarah, daughter John Nash, Esq. She died May 27, 1716. He married July 31, 1716, Mary Beach of Wallingford.

In May 1670 Capt. Yale, with a small band of other adventurers, founded the settlement of Wallingford. He was one of the most prominent, active and energetic men among them. He assisted in the formation of the church, Feb. 15, 1675. He helped in securing the services of Rev. Samuel Street in 1672, and of Rev. Samuel Whittelsey April 4, 1709. In 1710 Capt. Yale and Rev. Samuel Street were the only surviving signers of the Plantation Covenant of Wallingford.

Capt. Yale was on a committee of three to sell Indian lands in the town. He was Justice of the Peace, Captain of the train band, surveyor of land, and moderator of their meetings. He kept a record of their proceedings for nearly twenty years.

He was one of the fifty-one persons who on Oct. 22, 1720, constituted the first Congregational Church at Meriden. Their pastor was Rev. Theophilus Hall.

The first part of the paper discusses the importance of the research and the objectives of the study. It then proceeds to a literature review, followed by a description of the methodology used. The results of the study are presented in the next section, followed by a discussion of the findings and their implications. The paper concludes with a summary of the main points and a list of references.

The research was conducted in a laboratory setting, using a series of experiments to measure the effects of different factors on the system. The results show that the system is highly sensitive to changes in the input parameters, and that the output is highly variable. This suggests that the system is not very robust, and that it may be difficult to control in a practical setting.

The findings of the study have several implications for the design and operation of the system. First, it is important to carefully monitor the input parameters, and to make adjustments as needed to maintain the system in a stable state. Second, it is important to have a good understanding of the system's behavior, and to be able to predict the output for a given set of input parameters. Finally, it is important to have a backup plan in case the system fails, as the consequences of a failure could be severe.

In conclusion, the research shows that the system is highly sensitive and variable, and that it is difficult to control. This suggests that the system is not very robust, and that it may be difficult to operate in a practical setting. The findings have several implications for the design and operation of the system, and it is important to take these into account when working with the system.

The town of Moreau was organized March 23, 1805. The first town meeting for the election of officers was held at the home of the storekeeper, Samuel Scovill, Jr., April 16, 1805.

While John B. Stevens was residing at what is now (1935) 115 Saratoga Avenue, Sarah was with her mother one day washing clothes. The ravine in front of the Stevens house contained a spring. The washhouse was near the spring. Suddenly an Indian appeared and, seeing that the women were startled, he stuck his hatchet into the washhouse roof as a sign of friendship.

July 27, 1837, Simon G. and Sally Stevens, of the town of Warren, County of Warren, State of Penn., sold to John B. Stevens, who was sojourning in the County of Warren, a parcel of land. The lot, which bounded the Stevens farm on the south, was sold for 100 dollars. Aug. 10, 1819, the same lot was deeded to John B. Stevens by Nehemiah Stevens, William and Lydia Stevens.

The first part of the paper is devoted to a general discussion of the problem of the origin of life. It is shown that the problem is not only a scientific one, but also a philosophical one. The scientific aspect of the problem is concerned with the question of how life arose from non-life. The philosophical aspect is concerned with the question of whether life is a necessary part of the universe or whether it is a mere accident. The paper then proceeds to a discussion of the various theories of the origin of life. These theories are divided into two main classes: the theory of spontaneous generation and the theory of biogenesis. The theory of spontaneous generation is the older of the two and is based on the idea that life can arise from non-life. The theory of biogenesis is the newer of the two and is based on the idea that life can only arise from life. The paper then discusses the evidence for and against each of these theories. It is shown that the evidence for spontaneous generation is weak, while the evidence for biogenesis is strong. The paper then concludes by stating that the theory of biogenesis is the most reasonable one and that it is the only one that is supported by the evidence.

10. Struck off strength of C.E.F. in Canada, 29-3-19, "Demoblization" at Montreal, P.Q.

The following statement of his World War service with the C.E.F. was written by the compiler:

Enlisted in the Canadian Medical Corps Aug. 16, 1917, at Vancouver, B.C. Was trained at Willows Camp, Victoria, B.C., M.D. No. 11.

Transferred to Second Depot Battalion (Infantry), Victoria B.C.R. April 5, 1918.

Left Victoria, B.C. for Sackville, Nova Scotia, April 19, 1918. Captain Futchcr, O.C.

Transferred from Military District No. 11, Victoria, B.C., April 30, 1918.

Paid at Sackville, N.S., May 3, 1918. Made a member of the Military Police Force.

After a few weeks at Sackville, sent to Halifax, Nova Scotia, and went aboard the transport "Ajana" May 15, 1918, enroute to Liverpool, England. Was aboard the "Ajana" twelve days. During that time, I was on detached duty as Runner with the Conducting Staff O.C. We were lifepreservers and had frequent boatdrill. Our transport was accompanied by several ships carrying American troops. A British cruiser escorted our fleet to Liverpool. Before daylight May 27, 1918, our fleet was attacked by a German submarine. At daylight we were outside Liverpool and surrounded by American destroyers. These boats darted about like wasps, and could make an about turn in doublequick time. Our protector, the "Cornwall," left us, and we proceeded to approach the harbor under the alert protection of the American destroyers.

From the Liverpool docks, May 27, 1918, we marched to the railroad station and boarded a train for Seaford, Sussex, where we arrived before daylight the next morning. As we were from British Columbia, our training camp was the First Reserve.

Paid at the First Reserve June 4, 1918. Trained there until Sept. 12, 1918, when we left by train for Folkestone, enroute to Bognor, France.

During our training in England we had two furloughs. The first was for six days. It was called a landing leave. Several of us went to Edinburgh, Scotland. We also spent a few days in London. The second furlough was

called a draft leave and was cut down to three days. Furthermore, no allowance was given us for transportation. Therefore our excursion was also walking leave. We went to Brighton.

Our party crossed the English Channel from Folkestone to Bologne, France, Sept. 13, 1918. We spent that night in camp near the city.

From Bologne we were transported to the Canadian Base at Etaples by a freight train consisting of an engine and boxcars. On the sides of the cars were painted the words, "36 Hommes, 18 Chevaux."

At Etaples we had a gas test and were furnished with 120 rounds of ammunition. We also had a physical examination before a physician.

From Etaples we went to Agnez, near Duisans, where we were introduced to the "cootie." Our quarters were in tin cylindrical huts, and it was only a few hours after our arrival that we discovered to our sorrow that the place had other tenants besides soldiers.

Although our party was assigned to join the Seventh Battalion of Infantry, at Agnes, Sept. 20, 1918, we were re-assigned to be replacements for infantry that required reinforcement. It was my luck to be transferred to the Sixteenth Battalion, Canadian Scottish, one of the best regiments that Canada sent to France.

Our party intended for the 16th went from Agnes through Arras and joined the shock troops at the Crow's Nest, near Menchy, where the "Laddies from Hell" were camped.

Lieutenant-Colonel Cyrus W. Peck, the O.C. of the 16th, informally inspected us. The Chaplain, Canon Scott of Quebec, was with him.

Canon Scott said to the O.C., "Are these men joining our Battalion?"

"I hope so," answered the O.C.

"Well, men, I will see that you get a good funeral," remarked the Chaplain.

"I hope not, Sir," answered one of our party.

The worthy divine, seeing that his last remark had not created a cheerful atmosphere, made amends by remarking,

"When the war is over, I will marry any of you free of charge."

At Cambrai, a few days later, Canon Scott was severely wounded and sent home to Canada. Major Bell-Irving and a lieutenant were killed in the same battle. During that engagement the 16th lost many men.

On our trip from the Crow's Nest toward Cambrai, I remember passing Telegraph Hill, Burlong Wood, and our artillery supports. But the first time that I was under shellfire was at the horselines.

A squad of eight men, including myself, slept one night in a shellhole not far from the transport highway. During the night the German gunners, who were firing at the highway, dropped a shell into another hole about fifteen feet from our billet. Although we received a shower of dirt, not one of our squad was hurt.

After the Cambrai fight we had a short rest at Burssy.

During our march from Burssy to the Seenee Canal, we carried our drinking water in five gallon coal oil cans.

One night we billeted in a large tunnel, or dugout.

The next day we crossed the Canal over a ruined bridge and were delayed by a fight with the German rearguard.

At Douai, a few days after, we had to dig a trench under fire. A gas-shell, which landed near me, gassed several men.

After our Douai fight, we were billeted near Inchy, where we attended the funeral of Major Bell-Irving and a lieutenant, who were killed at Cambrai.

Our next move was to comb up the country after the retreating Germans. They left Somain when our patrol entered the town. The French civilians were left behind. They gave us quite an ovation.

At Raismes, a few days later, we were held back by German snipers and machine gunners. The enemy also used gas to delay our advance.

After taking Raismes, we returned to Somain, where we rested until Nov. 12, 1918.

The night of Nov. 10, 1918, while guarding some buildings, I got the first news of the Armistice. The townspeople when passing on the street would greet each other with the words: "Finis la guerre, Monsieur!"

On Nov. 12, 1918, our O.C., Lieutenant-Colonel Cyrus W. Peck, D.S.O., V.C., on the parade ground, gave the eventful command:

"Sixteenth Battalion! In column of fours, No. Three Company leading, march to the Rhine!"

On our march we passed through Herin, Valenciennes, Flace de Cambrai, Souignes, Nivilles, Ardenne, Poteau, and Abendsimmung. At the latter place we were billeted on the night of Dec. 12, 1918.

Dec. 13, 1918, we left Abendsimmung, passed through the city of Cologne and over the Hohenzollern Bridge, which spans the Rhine River at that place. We were in battle order with fixed bayonets, and all equipment was cleaned and polished to the limit for the memorable occasion.

Leaving Cologne, we marched inland to the bridgehead at Rath-Heimar. At that town, Dec. 14, 1918, I was placed on the sick report and sent to Goshen by ambulance. Enroute to Goshen, from the Battalion dressing station I went through the Field dressing station and the Casualty clearing station.

After spending that night in the Base Hospital at Goshen, the next day I was sent by hospital train to a General Hospital at Hardehot. France.

Jan. 9, 1919, I was transferred to the War Hospital at Bath, England. I went by the way of Bologne and Dover.

After a short time at Bath, I was assigned to enter the Convalescent Hospital at Bearwood, Berks, near Workingham, England.

Jan. 31, 1919, I left Bearwood for a sick leave of fourteen days in Dublin, Ireland. Enroute, I passed through London.

Feb. 14, 1919, I reported at No. 11 Reserve, Seaford, Sussex, after spending a few days in London, enroute from Dublin.

Leaving Seaford, Sussex, I reached the Shipping Camp at Kimmel Park, near Rhyl, Wales, and was assigned to the Montreal Unit. I was there during the Riots, when I was detailed for security duty.

Left Rhyl March 18, 1919 for Liverpool. Our party went aboard the "Minnekada" the following day, enroute to Halifax. The voyage took eight days.

March 23, 1919, we arrived in Montreal by train. I received my discharge there March 29, 1919. [Received War Service Badge, Series A, No. 92434.]

At Gurn Spring, Town of Wilton, Saratoga County, N.Y., a memorial was erected in front of the Town Hall in honor of the Wilton men and women who served in the World War.

Page 3, Line 11. The settlers at Bogistow Pond once were besieged by a party of King Philip's warriors. The Indians tried to set fire to the fort by placing against it a cart filled with burning flax. The cart was stopped by a rock that blocked the wheels. An Indian who exposed himself to start it was killed and the rest ran away.

After two months the Indians returned and the settlers dashed out, and after killing several, drove the rest away. They never dared to return. The battle of Bogistow Pond was fought May 6, 1676, the settlers being under the leadership of Captain Morse.

THE HISTORY OF THE UNITED STATES

The history of the United States is a story of growth and change. It begins with the first settlers, who came to the Americas in search of a new life. They found a land of opportunity, but also a land of challenge. The early years were marked by conflict and struggle, as the settlers fought to establish their own communities. Over time, the United States grew from a small colony into a powerful nation. It was a process of constant evolution, shaped by the dreams and aspirations of its people. The story of the United States is a testament to the power of the human spirit and the ability of a nation to overcome adversity. It is a story of hope and progress, of a people who have built a great nation from the ground up. The history of the United States is a story that continues to inspire and inform us today.
